

SAHAYAK सहायक

Offline. Vernacular. On your side.

India opened 59 crore Jan Dhan accounts.

Sahayak helps those account holders spot a scam before the money moves, and claim what they are owed.

At the CSC counter and on their own phone • no internet • Hindi and English, by voice or touch • built and measured

Ideas for India 2026 • Inclusive Innovation for Bharat • Financial Inclusion • Grand Jury Round, Delhi, 14 October 2026

● THE PROBLEM

Lost to fraud, and missing what they are owed

₹22,495
crore

lost to financial cyber fraud
in 2025, across 24 lakh
complaints

DEMO PERSONA · NOT A REAL PERSON

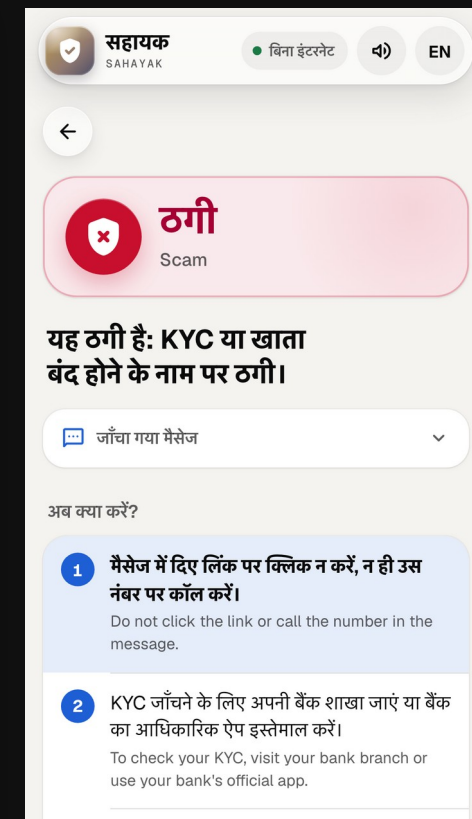

Aged 74, with a BPL ration card and a
bank account

An SMS arrives from 9876501234:

प्रिय ग्राहक, आपके SBI खाते का KYC खत्म हो गया है।
तुरंत अपडेट करें, नहीं तो आज रात खाता बंद हो जाएगा।
लिंक: <http://sbi-kyc-update.xyz>

And is likely owed:

**The Ayushman Vay Vandana card: hospital care
up to ₹5 lakh a year, for you (shared with a
spouse who is 70+).**

Sahayak's answer to that SMS

● TRY IT NOW

Try it on your own phone, right now

roshworldwide.github.io/optum-v2

Three things to try

1

Tap “Pay ₹500 for your Ayushman card”

Sahayak says Scam, and why: the card is free at the CSC.

2

Turn on airplane mode

Check another message: it still answers, on the phone itself.

3

Tap “What am I owed?”

Answer as someone aged 74: health cover comes first.

No install, no account. Tap EN for English, or “Paste and check” a copied message.

● HOW IT WORKS, AND WHAT CHANGED SINCE ROUND 1

How it works, and why rules decide

1

Ask, at the counter or on the phone

Paste, speak, photograph, describe a call, or scan a UPI QR. Nothing leaves the device.

2

Rules decide, offline

Named signals, a pattern matcher and a small classifier, from signed packs: about 2 ms a check.

3

A clear answer, with reasons

Scam, Suspicious, No scam signs (never “safe”) or Could not check; what to do; a complaint draft.

4

The same answer on the phone

After one visit the phone runs the same engines offline: the node's exact answer on 1,841 of 1,841 test checks.

ROUND 1 SAID

A 14B language model, offline on the Crucible runtime, would decide, with a fine-tuned finance model.

WE MEASURED A MODEL: QWEN2.5 3B, ZERO-SHOT

	Scams caught	Genuine flagged	Per message
3B model	99 of 103	21 of 34	2.13 s, GPU
Sahayak	67 of 103	11 of 34	1.7 ms, CPU

The same 137 real published messages · first runs, 7 Oct

SO

Rules decide every verdict. A model may only reword the explanation, through a safety gate, and is off by default. Next, a second opinion that can only raise a warning, in languages Sahayak cannot read yet: there the model caught 14 of 15 scams.

Real messages are harder: it caught 7 in 10

REAL MESSAGES PEOPLE RECEIVED, AS PUBLISHED · FIRST RUN, 7 OCT

67 of 97

scams caught (69%)

11 of 34

genuine flagged (32%)

137 messages published by the Income Tax portal, PIB Fact Check, courts and fact-checkers; gathered by an AI agent that never saw the code.

Keyword blocklist: 62 of 97 caught, 17 of 34 flagged. Other languages: 6 of 6 scams "Could not check", 0 green.

Fixes learned from one half only. The unread half: 31 of 44 caught (was 28), 6 of 20 flagged (was 6).

BLIND RED TEAM (7 OCT)

92 of 103

scams caught

182 by an AI model that never saw the code;
14 of 59 genuine flagged.

OUR OWN SET, FROZEN (2 OCT)

34 of 37

scams caught · 95% CI 79–97%

Genuine flagged: 2 of 23. A 3B model: 36 of 37 caught, 7 of 23 flagged.

STRESS TEST RE-RUN (7 OCT)

0 errors

30 phones, 300 checks at once

A 5,000-check soak. Hostile input: 360 cases, 0 unexpected.

Not yet: real users, and messages from people's own phones. Next: a field morning at a CSC.

Health first, counted every month, and who pays

Health first

1.1 crore
of ~6 crore

seniors aged 70+ had their Ayushman Vay Vandana card by Feb 2026

- For anyone 70+, results lead with it: hospital care up to ₹5 lakh a year, shared with a 70+ spouse; not OPD.
- The CSC makes the card, free. The scam check flags “pay ₹500 for your card”.

Counted every month

Counts only: never names, numbers or messages.

- Checks, and each verdict
- Rupees at risk: the money a scam asks for, never called “saved”
- People found eligible, by scheme
- Cards made at the counter: the operator ticks each one
- A signed monthly export for the district; counts under 5 hidden

Pilot measures, not results yet.

Who pays

₹39.23 lakh

One district, 20 villages, 50 counters, 6 months. Estimates, not quotes (round 1 said ₹35–40 lakh). Line items in the appendix.

- At 500 counters: about ₹24,000 a counter a year. The operator's ₹9,600 is the biggest part.
- After month six: bank, health agency, literacy-centre NGOs, card fees. Hypotheses, not commitments.

Our ask, and what we do next

Next 30 days

1 A field morning at a CSC

One morning, with consent: message cards before and after, the benefits interview, the operator's timing. Protocol, consent forms and scoring are ready.

2 Messages from people's own phones

Real scam and genuine messages, collected with consent, scored once on a frozen pack, every miss shown.

3 A district partner

One district, with a CSC or bank-agent network and an NGO, for a 6-month pilot. Letter-of-intent templates are ready.

THE ASK

Introduce us to one district: a CSC or bank-agent network, or a district office, to host the field morning and then a 6-month pilot.
